***Yponomeuta rorrella* (Hb.) (Lep.: Yponomeutidae) and *Syncopacma larseniella* (Gozmany) (Lep.: Gelechiidae) recorded new to Monmouthshire**

On 15 July 2002, to assist with a survey being undertaken there, a number of moth recorders visited Hendre Woods, an ancient woodland site to the west of Monmouth. After an enjoyable evening of moth-trapping, I returned home with two moths that required further investigation. With the assistance of the long-awaited *Moths and Butterflies of Great Britain and Ireland* volume 4 (part 2) one was easily identified as *Syncopacma larseniella*, and the other proved to be *Yponomeuta rorrella*. The latter specimen was passed on to David Slade at the National Museum of Wales to corroborate this identification. These species are not listed in G. A. Neil Horton's 1994 checklist for Vice County 35 (*Monmouthshire Lepidoptera*. Comma International Biological Systems). Martin Anthoney, the current county recorder, has confirmed that he has no previous records of them, so these are presumably new for Monmouthshire.— MARTIN J. WHITE, 58 Victoria Quay, Maritime Quarter, Swansea, SA1 3XG.
